DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-31 are rejected under 35 U.S.C. 102(e) as being anticipated by Stenstrom et al. (U.S. Patent No. 6,466,616 B1).

Stenstrom et al. discloses an apparatus (Fig. 5) and a method (Fig. 6) for reducing the overall power consumption in a receiver by adjusting the number of taps used in a pre-filter and an equalizer. The apparatus includes a memory for storing a signal, and a channel estimator for estimating a quality parameter and a number of channel filter taps using the stored signal. The apparatus also includes a controller for evaluating the estimated quality parameter and the estimated number of channel filter taps to determine a number of pre-filter taps. The controller also evaluates the estimated quality parameter and the estimated number of channel filter taps to determine a number of equalizer taps to be used in an equalizer where the number of equalizer taps is less than or equal to the estimated number of channel filter taps.

With respect to claims 1, 7, 13, and 26, the channel estimation of the channel taps is performed by the channel estimator 516; the calculation of the energy of the taps, the selection of a predetermined threshold, and the predetermination of the number of taps for the equalizer 518 are performed by the controller 520 and the pre-filter calculation controller 522. See col. 4, line 41 to col. 5, line 51 and col. 6, lines 19-59.

With respect to the dependent claims 2-6, 8-12, 14-25, and 27-31, all the claimed subject matter is well known in channel and equalization communications system.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

References Larsson et al., Bottomley, Kot, and Molnar et al. are related to a receiver including channel estimator for estimating the channel length of filter taps to determine a number of channel taps for an equalizer of the receiver.
